[resolved] Turning the_title into a css class (8 posts)

yaphi
Member

I need to turn "About us" into "aboutus" so I went ahead and tried what many have posted here:

```
trim(wp_title(""));
```

What definitely doesn't work. Next I tried:

```
print trim(strtolower(the_title_attribute('echo=0'))));
```

And that still doesn't work. How can I achieve this?

Try `<?php str_replace(' ','',strtolower(the_title_attribute('echo=0'))); ?>`

You can also use `the_title('','',false);` to prevent the value being returned.

Just a little easier to write... :)

But if you use `the_title`, you'll need to strip off the tags, won't you? That's why I thought using `the_title_attribute` might be a better approach.

Nope, if you set to false it just gives you the title without `<a>` links.

;)

Ahh...I misunderstood trim(). Thanks everyone I got it.

Oh and for anyone that stumbled upon this, here was the code

```
<h2 class="<?php print strtolower(str_replace(' ','',
get_the_title($post->post_parent))); ?>"><?php echo
get_the_title($post->post_parent); ?></h2>
```

This prints an <h2> with a class of the parent's page title...so if you were on About Us / Contact or something,

This topic is resolved

WordPress version: 2.7

Tags

css

override

php

title

```
<h2 class="aboutus">About us</h2>
```

that way I can replace it with an image.

This was exactly what I needed! I changed it slightly to pull the current page title, instead of the parent and to only show on pages besides the front page:

```
<?php if (!is_front_page()) print strtolower(str_replace(' ','',
get_the_title($post))); ?>
```
